Book & Park Platform
Quick Start guide for Service Providers

BOOK & PARK PLATFORM QUICK START GUIDE

Index

Introduction

The **Book & Park Platform** offers service providers the possibility to make parking garages / grounds bookable for consumers on a neutral platform with no IT, security or privacy hassle. This setup allows user-friendly reservations for consumers via their favourite mobility apps.

This Quick Start Guide provides the information to get started. Connected parking Resource providers offer their resources via our platform API and use the platform tools to manage pricing and availability. For Service Providers, the two main parts to use are the API and the Portal.

API

The API can be accessed with the credentials you receive when signing up. Be aware that only resources will be available that are offered to you by our Resource Providers. Resource governance can be managed via the back end Portal.

The interactive test environment with instructions can be found at:
https://api.mp-test.monotch.com/swagger-ui.html#/Car_Area_Parking

Portal

The back end Portal will give you access to your governance tools and bookings overview. It will show you which resources are available to you so you can manage which resources you want to include in your services. The Portal also provides you with metrics and export tools for your administration to get maximum insight in your platform use. Monotch will provide an admin account to authorized customers. The admin portal user will be able to create and manage other users as well.

The portal can be accessed at https://portal.mp.monotch.com/

Get started!

The following steps are needed to start using the TLEX Parking Platform as a Service Provider:

1. Request your personal Service Provider admin-account (see Technical Support)
2. You will receive the login credentials for access to the API
3. You will receive the login credentials for acces to Portal

Technical Support
